MADE IN SWEDEN

Ifö Electric & environment

View from the factory over the beautiful Ivö lake.

When we started making porcelain luminaires in 1960, we did not know that the future was practically timeless. Long before concepts such as Ecodesign, sustainability and circular economy, our luminaires were symbols of timeless indestructibility.

We knew early on that the durability was good, but not as good as it turned out to be. We may not really have understood what a golden egg we were brooding. Time has shown that the luminaires last almost forever. They were not affected by time, light, heat or cold and offered unbeatable economy.

They were also reusable. The only thing that affects porcelain, glaze and shades is actually violence. Strangely enough, this is also rare. Luminaires that are more than half a century old are often reused.

Manufacturing still takes place in Bromölla in Sweden, which means short lead times and transports. We make most spare parts ourselves. In addition, it is easy to renew older luminaires

with new technology. We follow directives, standards and legal requirements. Our glass threads are standardized. Wish to renew a luminaire? Easy – choose a new shade. If the base needs to be replaced, the shade can be kept. Smart, economic and flexible.

We have followed the Low Voltage Directive, which applies before all national rules, and which is intended to protect people, property and pets from damage, since it came in 1973. We follow the EMC Directive, which requires products' electromagnetic ability to interact with other products. The Ecodesign Directive sets minimum requirements for the energy performance of products, prohibits the most energy- and resource-intensive products on the market and requires that there be a replaceability and availability of spare parts on the market. In addition, the luminaires are always tested for safety by a third party, Intertek Semko, and are S-marked.

Ifö Electric may not be known for change, but that is the point.
